Screening Test

Completed on : 17-Dec-2024 05:11 PM

#	Question	Response	Marks
1	Have you fully completed your education and prepared to work	Yes	1
2	Have you taken any long term training course on Java Technologies	Yes	1
3	Have you recently completed your education and training, and there is no major Gap (more than one year after the education)	Yes	1
4	Are you, willing to work on-premises (there is no work from home)	Yes	1
5	Can you write simple Java Programs on your own	Yes	1
6	Are you, available immediately to join us, if we hire you	Yes	1
7	Did you complete any kind of Developer Certification in Java	Yes	1
8	Do you know how to write unit testcases using Junit	No	0
9	if we hire you, will you be prepared to stay and work with us at least for two years	Yes	1
10	Will you be flexible any role in Software Engineering	Yes	1
11	Explain about yourself why you are the right candidate for this Job	Skipped	0

Overall Score : 9/11 (Promoted)

Coding Test

1. Write a program or method to find the smallest and largest numbers in an array of integers. Implement two methods: findSmallest(int[] numbers): Returns the smallest number in the array. findLargest(int[] numbers): Returns

the largest number in the array. Sample Input : If the input array is null or empty, the method should throw an `IllegalArgumentException` with the message "Array cannot be null or empty". Use Java's Stream API to solve the problem. Expected Output : Smallest number: 1 Largest number: 20

Marks Scored : 0

```
public class NumberUtils {

    public static int findSmallest(int[] numbers) {
        if (numbers == null || numbers.length == 0) {
            throw new IllegalArgumentException("Array cannot be null or empty");
        }
        // Implement the logic here
        return 0; // Placeholder return value
    }

    public static int findLargest(int[] numbers) {
        if (numbers == null || numbers.length == 0) {
            throw new IllegalArgumentException("Array cannot be null or empty");
        }
        // Implement the logic here
        return 0; // Placeholder return value
    }
}
```

2. Write a Java program that counts the occurrences of words in a given input string that are of a specified minimum length or longer. The program should return a map of words sorted in descending order of their frequency. If two words have the same frequency, they should be sorted alphabetically in ascending order. Sample Input : Ignore case sensitivity (e.g., "Test" and "test" should be treated as the same word). Words are sequences of alphanumeric characters. Punctuation and other symbols should not be considered part of words. Words shorter than the specified minimum length should be excluded from the count. Expected Output : Words with minimum length 8: exceptional: 2 wonderful: 1
